Glencoe Earth Science Ralph M. Feather 1999 Earth science is the study of Earth and space. It is the study of such things as the transfer of energy in Earth's atmosphere; the evolution of landforms; patterns of change that cause weather; the scale and structure of stars; and the interactions that occur among the water, atmosphere, and land. Earth science in this book is divided into four specific areas of study: geology, meteorology, astronomy, and oceanography. - p. 8-9.

Observations about Defining Collective Training Requirements Kenneth D. Cross 1998 In the past, collective training requirements have been defined in terms of the mission, mission segments, or broad functions that an Army aviation unit must learn to perform as a group. It is impossible to infer from these broad task descriptions the specific knowledge and skills that can be acquired only through collective training. Without a clear understanding of these requisite knowledge and skills, it is impossible to make prudent decisions about the level of realism that is required for each component of a collective training simulator. This white paper describes the nature of the problem and describes the authors' views about the unique knowledge and skills that can be acquired and sustained only through collective training exercises. All comments are aimed at the training requirements for the Aviation Reconfigurable Manned Simulator (ARMS) and development of the U.S. Army National Guard Bureau (USANGB).-- P.i.
