Improving Student Comprehension in Chemistry Laboratories Tracy Lynn Haroff 2006

EPA Publications Bibliography, 1984-1990: Report summaries 1990

Essentials of Introductory Chemistry Russo Steve Silver Michael 2001-12 "Introductory Chemistry," Third Edition helps readers master the quantitative skills and conceptual understanding they need to gain a deep understanding of chemistry. Unlike other books on the market that emphasize rote memory of problem-solving algorithms, "Introductory Chemistry" takes a conceptual approach with the idea that focusing on the concepts behind chemical equations helps readers become more proficient problem solvers. What Is Chemistry?, The Numerical Side of Chemistry, The Evolution of Atomic Theory, The Modern Model of the Atom 1, Chemical Bonding and Nomenclature, The Shape of Molecules, Chemical Reactions, Stoichiometry and the Mole, The Transfer of Electrons from One Atom to Another in a Chemical Reaction

Intermolecular Forces and the Phases of Matter, What If There Were No Intermolecular Forces?, The Ideal Gas Solutions, When Reactants Turn into Products, Chemical Equilibrium, Electrolytes, Acids, and Bases. For all readers interested in introductory chemistry.

Introductory Chemistry Steve Russo 2002 Steve Russo and Mike Silver turn chemistry into a memorable story that engages readers and provides the context they need to understand and remember core concepts. The book builds interesting applications and well-designed illustrations into the narrative to get and hold attention, then builds confidence with integrated active learning activities. Readers make the connections between concepts and the problem-solving techniques they need to master as they read. The new edition strengthens this conceptual approach and presents additional quantitative techniques in key areas. Readers will find enhanced support for quantitative problem-solving and more challenging questions at the end of each chapter, in addition to the wealth of technology-based support on The Chemistry Place(tm), Special Edition and on The Chemistry of Life CD-ROM . For college instructors and students.

Exploring Chemistry in Today's World Kathy L. Tyner 1993 The labs were specifically chosen with several goals in mind: a. To parallel lecture topics. b. To demonstrate important chemical principles. c. To employ the use of techniques of self-discovery and the scientific method. d. To illustrate topics that are of public interest or concern. e. To encourage the application of chemistry outside the laboratory. In keeping with these goals, (the author has) included laboratory assignments that are applicable to the real world or contain supplemental exercises that illustrate an application ... Where possible, commercial products are used, such as aspirin, antacids, etc ... Each lab begins with written objectives. Then, in an effort to increase involvement before the lab work begins, questions are posed that ask the student: a. To make predictions about the outcome of the experiment. b. To formulate a hypothesis. c. To think about a phenomenon in a specific way. d. To apply personal experience in answering a questions. -Pref.

Laboratory Exercises for Preparatory Chemistry Kathy Dodds Tyner 1994-06 Laboratory Exercises for Preparatory Chemistry is the perfect complement to a one-semester preparatory chemistry laboratory course. Tyner's manual emphasizes the application of chemistry and the principles of science to everyday life. The labs are directly applicable to the "real world" and often contain supplemental assignments that illustrate an application.
