Ecology and Management of Black-tailed and Mule Deer of North

America James R. Heffelfinger 2023-04-27 Black-tailed and mule deer represent one of the largest distributions of mammals in North America and are symbols of the wide-open American West. Each chapter in this book was authored by the world's leading experts on that topic. Both editors, James R. Heffelfinger and Paul R. Krausman, are widely published in the popular and scientific press and recipients of the O. C. Wallmo Award, given every two years to a leading black-tailed and mule deer expert who has made significant contributions to the conservation of this species. In addition, Heffelfinger has chaired the Mule Deer Working Group sponsored by the Western Association of Fish and Wildlife Agencies for more than 15 years. This working group consists of the leading black-tailed and mule deer experts from each of 24 states, provinces, and territories in western North America, putting them at the forefront of all conservation and much of the research on this species. The book represents all current knowledge available on these deer, including how changing conditions such as fires, habitat alteration and loss, disease, climate change, socio-economic forces, energy development, and other aspects are influencing their distribution and abundance now and into the future. It takes a completely fresh look at all

chapter topics. The revisions of distribution, taxonomy, evolution, behavior, and new and exciting work being done in deer nutrition, migration and movements, diseases, predation, and human dimensions are all assembled in this volume. This book will instantly become the foundation for the latest information and management strategies to be implemented on the ground by practitioners and to inform the public. Although this book is about deer, the topics discussed influence most terrestrial wildlife worldwide, and the basic concepts in many of the chapters are applicable to other species.

Minimum technical standards and recommendations for spinal cord injury management in emergencies

World Health Organization 2025-02-18 Health emergencies that cause large numbers of traumatic injuries can result in surges of spinal cord injuries (SCI) in a short period of time, that can easily overwhelm health system capacities. Limited specialized services, lack of awareness or knowledge of SCI management and weak coordination mechanisms may lead to significant delays in appropriate care for patients who have sustained a SCI, resulting in preventable and potentially life-threatening complications. Correct initial management of patients with SCI is vital to long-term survival and quality of life. This document complements the guidance provided by the WHO EMT publication "Classification and minimum standards for emergency medical teams" and has been developed to inform about the often-unmet need for SCI care in emergencies. It provides practical guidance on additional components of SCI specific emergency care for Member States, ministries of health, national and international EMTs and other key stakeholders wishing to build and enhance specialist SCI management surge capacity and capability; and defines minimum standards for the development and classification of respective specialized care teams (SCTs) within the EMT framework.
