**Methods and Associated
Tools for the Information
Systems Life Cycle** A. A.
Verrijn Stuart 1994 In the early
days of methods, the

distinction between the process
and the product was unclear.
Sometimes consideration was
concentrated on the problems
of what models should be
formulated - at other times, on
how such results were to be
achieved. The methods and
tools , as the two factors
became known, enjoyed
increasing attention over the
years, though emphasis, now
as then, is almost always
placed on the outcome, rather
than on the ways towards
it. This publication explores
methods and associated tools
in the perspective of the
information systems life cycle.
It discusses the need for
method flexibility, within a
design base of certain strict
standards and with respect
given to the potential
harmonization of existing
methods. The contribution of a
broad-range of specialists
ensures that papers extend
across the various facets of the

discipline.
