Essential Concepts of Chemistry Sharon Sherman 1999 Designed especially for students who have little or no background in chemistry or mathematics, *Essential Concepts of Chemistry* makes complex concepts understandable. This text provides an inexpensive, one-color alternative for introductory chemistry courses and emphasizes everyday applications of chemistry.

Climate in Motion Deborah R. Coen 2018-07-19 Today, predicting the impact of human activities on the earth's climate hinges on tracking interactions among phenomena of radically different dimensions, from the molecular to the planetary. *Climate in Motion* shows that this multiscalar, multicausal framework emerged well before computers and satellites. Extending the history of modern climate science back into the nineteenth century, Deborah R. Coen uncovers its roots in the politics of empire-building in central and eastern Europe. She argues that essential elements of the modern understanding of climate arose as a means of thinking across scales in a state—the multinational Habsburg Monarchy, a patchwork of medieval kingdoms and modern laws—where such thinking was a political imperative. Led by Julius Hann in Vienna, Habsburg scientists were the first to investigate precisely how local winds and storms might be related to the general circulation of the earth's atmosphere as a whole. Linking Habsburg climatology to the political and artistic experiments of late imperial Austria, Coen grounds the seemingly esoteric science of the atmosphere in the everyday experiences of an earlier era of globalization. *Climate in Motion* presents the history of modern climate science as a history of "scaling"—that is, the embodied work of moving between different frameworks for

measuring the world. In this way, it offers a critical historical perspective on the concepts of scale that structure thinking about the climate crisis today and the range of possibilities for responding to it.

The Periodic Table Eric R. Scerri 2020 *The Periodic Table: Its Story and Its Significance* traces the evolution and development of the periodic table, from Mendeleev's 1869 first published table and onto the modern understanding provided by modern physics.

Thinking Gary R. Kirby 1999 Suitable for courses in Critical Thinking, English Composition, Introduction to Logic, Philosophy, and Psychology, this text was written to give teachers and students a better and more comprehensive critical thinking text; one that presents an interdisciplinary, systematic, practical, and friendly approach to thinking a valuable skill that can enlarge the students' ability to think through life. The Second Edition reflects the analyses, ideas, and support of the teachers, reviewers, editors, and students who contributed their feedback.

Sheets, Diagrams, and Realism in Peirce Frederik Stjernfelt 2022-09-06 This book investigates a number of central problems in the philosophy of Charles Peirce grouped around the realism of his semiotics: the issue of how sign systems are developed and used in the investigation of reality. Thus, it deals with the precise character of Peirce's realism; with Peirce's special notion of propositions as signs which, at the same time, denote and describe the same object. It deals with diagrams as signs which depict more or less abstract states-of-affairs, facilitating reasoning about them; with assertions as public claims about the truth of propositions. It deals with iconicity in logic, the issue of self-control in reasoning, dependences between phenomena in their realist descriptions. A number of chapters deal with applied semiotics: with biosemiotic sign use among pre-human organisms: the

multimedia combination of pictorial and linguistic information in human semiotic genres like cartoons, posters, poetry, monuments. All in all, the book makes a strong case for the actual relevance of Peirce's realist semiotics.

Contemporary Developments in Nutrition Bonnie S. Worthington-Roberts 1981 Abstract: Increased awareness and desire for information on the part of the public and advances in nutrition science are brought together in a current review of prominent nutrition topics. A general understanding of basic nutrition is assumed, yet the material is presented in a format appealing to the general reader and is supported with diagrams and illustrations to help clarify the scientific information. Some of the broader issues discussed are the American food supply, infant feeding practices, nutrition in pregnancy, diet and child behavior, obesity, oral health, vegetarianism, and dietary influences on cancer. The more specific aspects of human nutrition described are related to the body's use of and needs for carbohydrates, fiber, fats, protein, vitamins, trace elements, and iron.

Frank Ramsey and the Realistic Spirit Steven Methven 2015-09-15 This book attempts to explicate and expand upon Frank Ramsey's notion of the realistic spirit. In so doing, it provides a systematic reading of his work, and demonstrates the extent of Ramsey's genius as evinced by both his responses to the *Tractatus Logico-Philosophicus*, and the impact he had on Wittgenstein's later philosophical insights.
