**Volcanic and Tectonic Hazard Assessment for Nuclear Facilities** Charles B. Connor 2009-08-27 Geoscientists worldwide are developing and applying methodologies to estimate geologic hazards associated with the siting of nuclear facilities. Understanding such hazards, particularly in the context of the long functional lifetimes of many nuclear facilities, is challenging. This book documents the current state-of-the-art in volcanic and tectonic hazard assessment for proposed nuclear facilities, which must be located in areas where the risks associated with geologic processes are quantifiable and demonstrably low. Specific topics include overviews of volcanic and tectonic processes, the history of development of hazard assessment methodologies, description of current techniques for characterizing hazards, and development of probabilistic methods for estimating risks. Hazard assessment examples are drawn from around the world. This volume will promote interest and debate about this important topic among researchers and graduates developing methods in geologic hazard assessment, geologists and engineers who assess the safety of nuclear facilities, and regulatory bodies that evaluate such assessments.

**Analogs for Planetary Exploration** W. Brent Garry 2011 Where on Earth is it like Mars? How were the Apollo astronauts trained to be geologists on the Moon? Are volcanoes on Earth just like the ones on other planets? The exploration of our solar system begins in our own backyard. Discoveries on other planetary bodies cannot always be easily explained. Therefore, geologic sites on this planet are used to better understand the extraterrestrial worlds we explore with humans, robots, and satellites. *Analogs for Planetary Exploration* is a compilation of historical accounts of astronaut geology training, overviews of planetary geology research on Mars, educational field trips to analog sites, plus concepts for future human missions to the Moon. This Special Paper provides a great overview of the science, training, and planning related to planetary exploration for students, educators, researchers, and geology enthusiasts. After all, as we learn about the solar system we can better understand our own planet Earth.

**Intermediate Listening Comprehension** Patricia Dunkel 1993 This intermediate text offers a rigorous, academically-focused listening program centered around a series of high-interest lectures. It is premised on the notion that second language learners must develop a much broader competency in listening comprehension than in speaking, since the listener has little or no control over the vocabulary, speech rate, or content used by the speaker.
