If Minds Matter Arthur L. Costa 1992 Noting that thinking processes cannot be separated from educational content, this two-volume collection aims to define the profound changes in educational thought during the 20th century, as well as to present examples of how these changes are embodied in excellent schools and other learning communities. Volume one is divided in three sections. The first section provides the background for thought-centered schools and probes their potential, examining both barriers to restructuring and major paradigm shifts already occurring in the schools. Section two calls for substantive school renewal and redesign from the inside out, addressing policy formation at the national, community, and school levels. Section three dictates transformational change for schools, that is, curricular reconceptualization that goes beyond the cognitive and into the metacognitive realm, in which the uses, applications and creative transfer of learning become the most significant outcomes. Volume two also presents three sections. The first delineates the theoretical basis for instructional methodologies that highlight cognitive skills and strategies, outlines cognitive strategies to foster thoughtful classrooms, and presents two scenarios depicting future school models. The second section introduces cooperative learning as a means for developing intellectual skills, indicating that problem-solving and critical-thinking skills can be experienced, practiced, analyzed, and applied in collaborative settings. The final section begins with a reassessment of student assessment methods, elaborates on methods and models for assessing, and provides a strategic plan for tracking students' transfer of learning. Each of the 51 articles includes references. (AA)

Methods for Effective Teaching Paul R. Burden 2007 "Methods for Effective Teaching" discusses research-based general teaching methods for K-12 classrooms that promote student understanding while emphasizing contemporary issues, including differentiating your instruction and making instruction modifications based on student differences. This edition offers new content on strategies that promote student understanding, critical competencies of effective teachers, teacher dispositions, integrating technology in instruction, differentiating instruction, managing lesson delivery, motivating students, and working with parents.

Immersive Learning Craig Frehlich 2020-09-10 Most people want to reach their maximum potential; and the use of tools are no different. Some say power is influence. If this is true, then virtual reality has "superpowers" because of its ability to make the unreal viscerally real, engaging and immersive. Thanks to these powers VR can influence and affect education in ways that no technology tool has in the past. This book will help people understand the power and true potential of virtual reality (or VR). The prime directive of this book is to provide educators with a way of thinking about how to use virtual reality in education in order to reveal its true superpowers. And, to arm educators with several hands-on lessons to get them started on implementing VR as a tool to enhance learning outcomes. Ultimately, the book aims to have educators clearly understand VR's role in transforming education, thus reaching its maximum potential.
