Standard Handbook of

Industrial Automation Douglas

M. Considine 2012-12-06 The

authors and editors of this

Handbook have attempted to

fill a serious gap in the

professional literature on

industrial automation. Much

past attention has been

directed to the general

concepts and philosophy of

automation as a way to

convince owners and managers

of manufacturing facilities that

automation is indeed one of the

few avenues available to increase productivity and improve competitive position.

Seventy-three contributors share their knowledge in this Handbook. Less attention has been given to the "What" and

"How" of automation. To the extent feasible and practical

within the confines of the pages allowed, this Handbook

concentrates on the implementation of automation.

Once the "Go" signal has been given by management,

concrete details-not broad

definitions and philosophical

discussions-are required. To be found in this distinctly different

book in the field are detailed

parameters for designing and

specifying equipment, the

options available with an

evaluation of their relative

advantages and limitations,

and insights for engineers and

production managers on the

operation and capabilities of

present-generation automation

system components,

subsystems, and total systems. In a number of instances, the logical extension of current technology into the future is given. A total of 445 diagrams and photos and 57 tables augments detailed discussions. In addition to its use as a ready reference for technical and management personnel, the book has wide potential for training and group discussions at the college and university level and for special education programs as may be provided by consultants or by "in-house" training personnel.

*Proceedings of the 7th International Conference on Industrial Engineering (ICIE 2021)* Andrey A. Radionov 2022-01-01 This book highlights recent findings in industrial, manufacturing and mechanical engineering, and provides an overview of the state of the art in these fields, mainly in Russia and Eastern Europe. A broad range of topics and issues in modern engineering is discussed, including the dynamics of machines and working processes, friction, wear and lubrication in machines, surface transport and technological machines, manufacturing engineering of industrial facilities, materials engineering, metallurgy, control systems and their industrial applications, industrial mechatronics, automation and robotics. The book gathers selected papers presented at the 7th
