A Controlled Experiment for Measuring the Impact of Aspect-Oriented Programming on Software Development Time

Sebastian Kleinschmager 2012-11-22 Bachelor Thesis from the year 2009 in the subject Computer Science - Software, grade: 1,0, University of Duisburg-Essen (Institute for Computer Science and Business Information Systems), course: Informatik - Empirische Softwareforschung, language: English, abstract: In this document, a controlled experiment on aspect-oriented programming that was performed in the context of my bachelor thesis is described and evaluated. The experiment was designed to make the overall performance of software developers using object-orientation and aspect-orientation on a number of tasks comparable. The primary focus of the experiment laid on whether aspect-orientation has a positive impact on the development time when comparing its performance with the performance of the object-oriented approach on the same task.

Watson is a quality executive with Xerox and one of the pioneers in benchmarking.

Official (ISC)2 Guide to the CISSP CBK

Steven Hernandez, CISSP 2006-11-14 The urgency for a global standard of excellence for those who protect the networked world has never been greater. (ISC)2 created the information security industry's first and only CBK®, a global compendium of information security topics. Continually updated to incorporate rapidly changing technologies and threats, the CBK continues to serve as the basis for (ISC)2's education and certification programs. Unique and exceptionally thorough, the Official (ISC)2® Guide to the CISSP®CBK® provides a better understanding of the CISSP CBK — a collection of topics relevant to information security professionals around the world. Although the book still contains the ten domains of the CISSP, some of

the domain titles have been revised to reflect evolving terminology and changing emphasis in the security professional's day-to-day environment. The ten domains include information security and risk management, access control, cryptography, physical (environmental) security, security architecture and design, business continuity (BCP) and disaster recovery planning (DRP), telecommunications and network security, application security, operations security, legal, regulations, and compliance and investigations. Endorsed by the (ISC)2, this valuable resource follows the newly revised CISSP CBK, providing reliable, current, and thorough information. Moreover, the Official (ISC)2® Guide to the CISSP® CBK® helps information security professionals gain awareness of the requirements of their profession and acquire knowledge validated by the CISSP certification. The book is packaged with a CD that is an invaluable tool for those seeking certification. It includes sample exams that simulate the actual exam, providing the same number and types of questions with the same allotment of time allowed. It even grades the exam, provides correct answers, and identifies areas where more study is needed.

Numerical Simulation of 3D Sheet Metal Forming Processes

Lorenzo Marco Smith 2005-08-19 The Numisheet Conferences occur once every three years, alternating in location between North America, Europe and Asia. The conference attracts international participation from the metal forming industry and university professors interested in sheet metal forming technology, with a strong emphasis on forming simulation. Although the conference is dominated by the automotive industry, the conference has a wider appeal, drawing contributions from the aircraft and canning industries as well. The Numisheet Conference Proceedings include the latest developments in metal forming technology, which is a rapidly growing and challenging opportunity for application of science to industry. The developments are described in over 125 papers included in Part A of the proceedings. In addition, this volume includes the Numisheet Keynote Program which focused on cutting areas of technology, and was presented by selected leading scientists in the field of metal forming. One of the hallmarks of the conference is the Numisheet Benchmark Study, which is a set of three blind tests prepared one year prior to the conference. Participants are invited to submit their predictions of how selected types of sheet metal will deform under large plastic deformation during the manufacture of actual automotive products and laboratory test specimens. The complete specifications and results of this blind test are described in Part B of the proceedings.

Benchmarking: An Essential Tool for Assessment, Improvement, and Accountability

Jeffrey A. Seybert 2006-07-28 This volume provides the reader with an increased understanding of benchmarking in the community college sector. It should be of interest to community college faculty and staff engaged in continuous assessment and institutional improvement efforts, as well as university faculty and graduate students studying community college policy and practice. While giving an overview of benchmarking and illustrating its growth within community college assessment, this volume provides four examples of national benchmarking initiatives designed

specifically for two-year institutions; describes how the data from those initiatives are being used for assessment, institutional improvement, planning, management, and decision making; and discusses benchmarking's costs, benefits, and limitations. This is the 134th volume of *New Directions for Community Colleges*, a quarterly journal published by Jossey-Bass. [Service Science](#) John Maleyeff 2020-08-03 To remain relevant in today's world, practitioners should presume that they have two jobs: first, to do their work effectively so that they provide value to the organization; second, to improve how the work is done so that their organization remains competitive. This book offers clear guidance to excel at this ubiquitous second job. Informed by an appreciation that most personnel that work in any firm, even firms that are manufacturing-oriented, routinely provide services as a key element of their jobs, this book explains how to provide and improve internal customer service, regardless of industry or role. It illustrates the common features, or service process "DNA," while providing a diverse set of examples to enhance understanding. Written by a pioneer in the development of principles and methodologies that address services in a structured and distinctive manner, this book stresses that service processes are distinctly different from manufacturing processes. Rigorous and practical, this book will appeal to students and professionals alike, in business, hospitality, industrial management, public health, and other fields. Online resources include Excel files that act as templates to help with quantitative analysis routines.

[Official \(ISC\)2® Guide to the CISSP®-ISSEP® CBK®](#) Susan Hansche 2005-09-29 The Official (ISC)2® Guide to the CISSP®-ISSEP® CBK® provides an inclusive analysis of all of the topics covered on the newly created CISSP-ISSEP Common Body of Knowledge. Ultra-Low Energy Domain-Specific Instruction-Set Processors Francky Catthoor 2010-08-05

Modern consumers carry many electronic devices, like a mobile phone, digital camera, GPS, PDA and an MP3 player. The functionality of each of these devices has gone through an important evolution over recent years, with a steep increase in both the number of features as in the quality of the services that they provide. However, providing the required compute power to support (an uncompromised combination of) all this functionality is highly non-trivial.

Designing processors that meet the demanding requirements of future mobile devices requires the optimization of the embedded system in general and of the embedded processors in particular, as they should strike the correct balance between flexibility, energy efficiency and performance. In general, a designer will try to minimize the energy consumption (as far as needed) for a given performance, with a sufficient flexibility. However, achieving this goal is already complex when looking at the processor in isolation, but, in reality, the processor is a single component in a more complex system. In order to design such complex system successfully, critical decisions during the design of each individual component should take into account effect on the other parts, with a clear goal to move to a global

Pareto optimum in the complete multi-dimensional exploration space. In the complex, global design of battery-operated embedded systems, the focus of Ultra-Low Energy Domain-Specific Instruction-Set Processors is on the energy-aware architecture exploration of domain-specific instruction-set processors and the co-optimization of the datapath architecture, foreground memory, and instruction memory organisation with a link to the required mapping techniques or compiler steps at the early stages of the design. By performing an extensive energy breakdown experiment for a complete embedded platform, both energy and performance bottlenecks have been identified, together with the important relations between the different components. Based on this knowledge, architecture extensions are proposed for all the bottlenecks.
