A Day in the Life of an American Worker Nancy Quam-Wickham 2019-12-02 This introduction to the history of work in America illuminates the many important roles that men and women of all backgrounds have played in the formation of the United States. *A Day in the Life of an American Worker: 200 Trades and Professions through History* allows readers to imagine the daily lives of ordinary workers, from the beginnings of colonial America to the present. It presents the stories of millions of Americans—from the enslaved field hands in antebellum America to the astronauts of the modern "space age"—as they contributed to the formation of the modern and culturally diverse United States. Readers will learn about individual occupations and discover the untold histories of those women and men who too often have remained anonymous to historians but whose stories are just as important as those of leaders whose lives we study in our classrooms. This book provides specific details to enable comprehensive

understanding of the benefits and downsides of each trade and profession discussed. Selected accompanying documents further bring history to life by offering vivid testimonies from people who actually worked in these occupations or interacted with those in that field.

Changing Cold Environments Hugh M. French
2011-10-13 Changing Cold Environments; Implications for Global Climate Change is a comprehensive overview of the changing nature of the physical attributes of Canada's cold environments and the implications of these changes to cold environments on a global scale. The book places particular emphasis on the broader environmental science and sustainability issues that are of increasing

concern to all cold regions if present global climate trends continue. Clearly structured throughout, the book focuses on those elements of Canada's cold environments that will be most affected by global climate change - namely, the tundra, sub-arctic and boreal forest regions of northern Canada, and the high mid-latitude mountains of western Canada. Implications are considered for similar environments around the world resulting in a timely text suitable for second and third year undergraduates in the environmental or earth sciences courses.
